C2⁺, M1⁺

Installation Requirements
General information

About this document

This document describes the installation requirements for the C2+, M1+ dental treatment centers.

Their subsequent installation is described in the Installation Instructions REF 59 58 470 (C2+) and REF 59 91 059 (M1+).

Besides you need the drilling template, REF 58 71 673, for secure fastening of the treatment center to the floor.

Changes since the last version 06.2007:

1.1 Safety

**ATTENTION**
It is essential that you comply with the warning and safety information contained in the Installationsvoraussetzungen.

All such information is highlighted by the captions NOTE, ATTENTION, and CAUTION.

**ATTENTION**
For reasons of product safety, only original Sirona accessories approved for this product, or accessories from third parties approved by Sirona, may be used. The user is responsible for dangers resulting from the use of non-approved accessories.

If any devices not approved by Sirona are connected, they must comply with the applicable standards, e.g.:
- IEC 60950 for information technology equipment and
- IEC IEC 60601-1 for medical electrical equipment

In case of doubt, contact the manufacturer of the system components.

**ATTENTION**
Any person who assembles or modifies a medical electrical system complying with the standard IEC 60 601-1-1 (safety requirements for medical electrical equipment) by combining it with other equipment (e.g. when connecting a PC) is responsible for ensuring that the requirements of this regulation are met to their full extent for the safety of the patients, the operators and the environment.

**ATTENTION**
The loudspeaker socket of the monitor may be connected only to a device which complies with IEC 60950 (e.g. PC) or IEC 60601-1, and under no circumstances e.g. to a stereo system etc.

**ATTENTION**
The floor must be flat and level (DIN 18 202). A steel plate must be used for uneven floors (see Section 1.5, "Mounting plates" on page 12).

**ATTENTION**
The floor must have a minimum loading capacity of 0.5 N/cm².

**ATTENTION**
Interference of electromedical devices caused by radio telephones:
To ensure the operational readiness of electromedical devices, the use of mobile radio telephones in the practice or hospital area is prohibited.

**ATTENTION**
Electromagnetic compatibility: The unit should not be operated in the immediate vicinity of other devices. If this proves to be unavoidable, the unit should be monitored to ensure that it is used properly.
1.2 Media quality

Water quality
Lime deposits and corrosion residues in tap water can lead to the following malfunctions:
- Premature clogging of the filters in the unit
- Rapid clogging of the fine water paths and jets in the treatment instruments
For these reasons, the following points must be observed:
- If the water hardness exceeds 12° dH (=2.15 mmol), install a water softener.
- Set dilution hardness to 8° dH (1.43 mmol).
- Install a conventional fine filter. Fineness: >80 µm (0.08 mm).
- Installation must be performed in compliance with the recommendations of the national installation requirements (e.g. EN1717/DIN 1988).
- The water quality must comply with the national requirements for drinking water.
- The connection must be made to cold water.

Suction pipe
Install steam trap K.
With a vacuum of pu >0.18 bar back pressure, the treatment center must be retrofitted with the “Vacuum limiter” retrofit kit (Order No.: 59 68 826).

Air quality
Oil-free, dry and hygienically perfect air is required for driving the highspeed handpiece, for cooling the burr drives and for the cooling spray.
1.3 Supply lines in the termination panel

- 1: Center base plate opening to floor
- 2: Foot end
- 3: 1 3/8" min. 500mm 20"
- 4: max. 5mm 3/16"
- 5: max. 5mm 3/16"
- 6: 10 x 1mm 3/8" x 1/32"
- 7, 6: min. 500mm 20"
Observe the national regulations for electrical installations (e.g. VDE 0100, VDE 0100, Part 710).

Observe the national regulations for water supply installations (e.g. EN 1717, DIN 1988) and sewage installations (e.g. EN 12056-1).

For the suction pipe, observe the instructions in the Suction Machine Installation Instructions.

For fastening the pipe ends in the installation field, we recommend using an installation template. They can be ordered from Sirona under REF 33 15 830.

If necessary, you can also prepare the template yourself based on the above sketch (not true to scale!).

### Table 1: Supply lines

Fuse: 16A slow-blow  
Recommended: Type B automatic circuit breaker |
| 8    | not applicable |
| 9    | Installation pipe (or corresponding flat duct) for additional requirement e.g. practice network connecting cable |
Supply above the floor, “above-floor installation”

The supply pipe ends, corner valves and cables must be routed as shown above.

The retrofit kit for above-floor installation (33 17 265) is required for installation.

⚠️ ATTENTION
For cleaning, rinse the air and water pipes thoroughly (metal chips!).

Supply through the floor, “underfloor installation”

1. The top edges of the corner valves for air and water must not protrude more than 60mm above the upper surface of the finished floor.
2. The suction and drain pipes must be flush with the upper surface of the floor (a deviation of +5mm is permissible).
   Internal diameter for both pipes: 36,5mm.
3. The electrical cables must protrude at least 500mm.
1.4 Underfloor installation of SIVISION connections

**Important information for the installer**

Depending on the prevailing local conditions, the existing cable set can be installed in the cable duct of an underfloor installation by an installer prior to the installation of the dental treatment center. In this case, please observe the following:

Proceed with **extreme care** when running the cables. Particularly cables L15 and L38 are very sensitive, and must never be kinked or twisted. The cables must **not overlap or cross one another**.

RS232 (L37) and the XGA cable (L38) are not yet cut to length and terminated on the PC side. It would be impossible to pull the cables through when installing them under floor level if a sub D connector were already connected. These cables should always be pulled.

Free length **A** of cables at the treatment center end:
Length **A** = 600mm

If S video cable L15 is equipped with both a female and a male connector, make sure that the female connector (socket) points to the connection box of the treatment center.

1. Bend the wire at the front end of cables L37 and L38 to form a hook.

2. Pull cables L15, L37 and L38 as well as the **audio** and protective ground wire cables from the treatment center through the cable duct to the location of the SIVISION PC.

Save the accessory parts for final installation!
1.5 Mounting plates

For especially uneven floor conditions, a steel chair plate is available to compensate for the irregularities of the floor (REF 58 71 913).

For floors which do not permit permanent connection of the unit (e.g. demo operation at a fair), installation on a steel demo plate is possible (REF 58 66 301).
If the C2⁺ or M1⁺ is installed as a replacement for an M1 at this position, then an adapter plate, with the aid of which the existing mounting holes can be used, is available under the order number 58 70 493.

## Power supply connection / Nominal current

- at 230V, 50Hz: 4.5A
- at 115V, 50/60Hz: 9.5A
- at 100V, 50/60Hz: 11.5A

## On-site pressure readings

- Air min./max.: 5.5 / 7.5bar
- Water min./max.: 2.5 / 6bar

## Operating conditions

- Ambient temperature: 10°C – 40°C (50°F – 104°F)
- Relative humidity: 30% – 75%
- Air pressure: 700hPa – 1060hPa

## Transport and storage conditions

- Temperature: -40°C – +70°C (-40°F – 158°F)
- Relative humidity: 10% – 95%
- Air pressure: 500hPa – 1060hPa

## Protection class

- Class I equipment

## Degree of protection against ingress of water

- Ordinary equipment (not protected). The foot switch is protected against dripping water IPX 1.

## Mode of operation:

- Continuous operation with intermittent loading corresponding to the dental mode of working.

## Tests / approvals

- This dental treatment center complies with the requirements of IEC 60601-1 (electrical and mechanical safety) and of IEC 60601-1-2 (electromagnetic compatibility).
- DVGW: This unit complies with the technical rules and requirements on safety and hygiene for connection to the drinking water supply, provided that a disinfection system is installed.
3 Electromagnetic compatibility

C2⁺, M1⁺

3.1 Accessories ................................................................................................................ 24
3.2 Electromagnetic emission ............................................................................................ 25
3.3 Immunity to interference ............................................................................................. 26
3.4 Working clearances ..................................................................................................... 28

NOTE

The C2⁺, M1⁺ fulfills all requirements for electromagnetic compatibility (EMC) compliant with IEC 60601-1-2.
The C2⁺, M1⁺ is referred to as "UNIT" in the following.

Observance of the following information is necessary to ensure safe operation regarding EMC aspects.
3.1 Accessories

Making the PC connection

- The UNIT may be operated only with accessories and spare parts approved by Sirona. Unapproved accessories and spare parts may lead to an increased emission of or a reduced immunity to interference.
- The UNIT should not be operated immediately adjacent to other devices. If this proves to be unavoidable, the UNIT should be monitored to check and make sure that it is used properly.

The EMC measurements were performed with the following PCs:

PC as peripheral device for checking the interfaces with:

PC 1: Siemens Fujitsu, Pentium III, 650 MHz

Extension of the PCs

| Graphics card | PC 1: Graphik - Controller Matrox Millenium G450 DualHead PC 2: Graphik controller MS I NX 6800GT |
| Frame grabber card | PicPort Color frame grabber card (Leutron) REF: 46 93 961 |
3.2 Electromagnetic emission

The UNIT is intended for operation in the electromagnetic environment specified below. The customer or user of the UNIT should make sure that it is used in such an environment.

<table>
<thead>
<tr>
<th>Emission measurement</th>
<th>Conformity</th>
<th>Electromagnetic environment guidelines</th>
</tr>
</thead>
<tbody>
<tr>
<td>HF emission according to CISPR 11</td>
<td>Group 1a</td>
<td>The UNIT uses HF energy only for its internal function. The HF emission is therefore very low, and it is improbable that nearby electronic devices might be disturbed.</td>
</tr>
<tr>
<td>HF emission according to CISPR 11</td>
<td>Class B</td>
<td>The UNIT is intended for use in all facilities, including residential areas and in any facilities connected directly to a public power supply providing electricity to buildings used for residential purposes.</td>
</tr>
<tr>
<td>Harmonics according to IEC 61000-3-2</td>
<td>Class A</td>
<td></td>

</tr>
</tbody>
</table>

a. If an HF electrosurgical unit is integrated, it must emit electromagnetic energy in order to function properly. Any electrical devices located nearby may be influenced whenever the HF surgical unit is active. According to IEC 60601-2-2, Chap. 36, no limit values have been defined for active HF surgical units. They are therefore classified as Group 1 devices according to CISPR 11.
# 3.3 Immunity to interference

The **UNIT** is intended for operation in the electromagnetic environment specified below. The customer or user of the **UNIT** should make sure that it is used in such an environment.

</table>

\( P \) is the nominal transmitter output in watts (W) specified by the transmitter manufacturer and \( d \) is the recommended working clearance in meters (m).

The field strength of stationary radio transmitters is based on a local investigation for all frequencies\textsuperscript{b} less than the conformance level for all frequencies\textsuperscript{c}.

Interference is possible in the vicinity of equipment bearing the following graphic symbol.

\[ a. \text{ The higher frequency range applies at } 80\text{MHz and } 800\text{MHz.} \]

\[ b. \text{ The field strength of stationary transmitters such as the base stations of radio telephones and land mobile services, amateur radio stations as well as AM and FM radio and television broadcasting stations cannot be accurately predetermined. An investigation of the location is recommended to determine the electromagnetic environment resulting from stationary HF transmitters. If the field strength measured at the UNIT location exceeds the conformance level specified above, the UNIT must be observed with respect to its normal operation at each application site. If unusual performance characteristics are observed, it may be necessary to take additional measures such as reorientation or repositioning of the UNIT.} \]

\[ c. \text{ A frequency range of } 150\text{kHz to } 80\text{MHz results in a field strength of less than } 3\text{V/m.} \]
3.4 Working clearances

Recommended working clearances between portable and mobile HF communication devices and the UNIT

The UNIT is intended for operation in an electromagnetic environment, where radiated HF interference is checked. The customer or the user of the UNIT can help prevent electromagnetic interference by duly observing the minimum distances between portable and/or mobile HF communication devices (transmitters) and the UNIT. These values may vary according to the output power of the relevant communication device as specified above.

<table>
<thead>
<tr>

</tbody>
</table>

For transmitters whose maximum nominal output is not specified in the above table, the recommended working clearance $d$ in meters (m) can be determined using the equation in the corresponding column, where $P$ is the maximum nominal output of the transmitter in watts (W) specified by the transmitter manufacturer.

**Annotation 1**
The higher frequency range applies at 80 MHz and 800 MHz.

**Annotation 2**
These guidelines may not be applicable in all cases. The propagation of electromagnetic waves is influenced by their absorption and reflection by buildings, objects and persons.
We reserve the right to make any alterations which may be required due to technical improvements.
