Service Manual

VIDEO COPY PROCESSOR

**MODEL
P40U**

- ※ The HEAD LEVER on the FRONT PANEL should be located at "UP" position after servicing.
- ※ Use a white CLEANING PAPER (Parts No.; 857P002010) or a HEAD CLEANING PEN (Parts. No.; 859C425050) for cleaning of the THERMAL HEAD.
Do not use a russet CLEANING PAPER (Parts No.; 857P001030).
Because it may damage the THERMAL HEAD.

Before servicing this chassis, it is important that the serviceman reads the "SAFETY PRECAUTIONS" and "PRODUCT SAFETY NOTICE" in this service manual.

Specifications

● Power supply	120V AC 60 Hz
● Power consumption	85 W
● Input terminal	BNC contact plug video signal 1 Vp-p (75 Ω)
● Output terminal	BNC contact plug video signal 1 Vp-p (75 Ω)
● Resolution	(Standard) (H) 640dots x (V) 500lines Side feed (H) 800dots x (V) 500lines
● Gradations	256 gradation
● Printing time	Approx . 4.8sec.
● Operating conditions	Temperature 5-40°C Humidity 35-80 % RH (No dew)
● Print size	100x75mm (Standard)
● External Dimensions	154 (W) x 125 (H) x 314 (D)mm
● Weight	3.9kg

Features

● High speed printing	
● Error display function	
● Compact and light weight	
● Wired remote control	
Standard accessories	
BNC/BNC connection cable (2m)	1 piece
Wired remote controller	1 set
AC power cord	1 piece
Thermal paper K65H	1 roll
Cleaning paper	1 sheet
Easy operation label	1 sheet
Optional accessory	
Thermal paper K65HM

SAFETY PRECAUTIONS

NOTICE. Observe all cautions and safety related notes located inside the receiver cabinet and on the receiver chassis.

LEAKAGE CURRENT CHECK

Before returning the receiver to the customer, it is recommended that leakage current be measured according to the following methods.

1. Cold Check

With the AC plug removed from the 120V AC source, place a jumper across the two AC plug prongs. Turn the receiver AC switch on. Using an ohm-meter, connect one lead to the jumpered AC plug and touch the other lead to each exposed metal part (metal cabinet, screwheads, metal overlays, etc.), particularly any exposed metal part having a return path to the chassis. Exposed metal parts having a return path to the chassis should have a minimum resistance reading of 1 megohm. Any resistance below this value indicates an abnormality which requires corrective action. Exposed metal parts not having a return path to the chassis will indicate an open circuit.

2. Hot Check

The test sequence, with reference to the measuring circuit in Fig.A, is as follows:

- (1) With switch S1 open, the receiver is to be connected to the measuring circuit. Immediately after connection, the leakage current is measured using both positions of switch S2, and with the switching devices in the receiver in all of their operating positions.
- (2) Switch S1 is then to be closed, energizing the receiver, and immediately after closing the switch, the leakage current is to be measured using both positions of switch S2, and with the switching devices in the receiver in all of their operating positions.

Current measurements of items (1) and (2) are to be repeated after the receiver has reached thermal stabilization.

The leakage current shall not be more than 0.5 millampere.

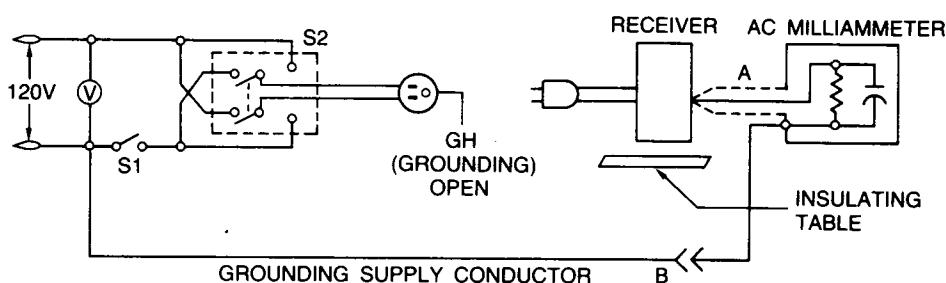

Fig. A

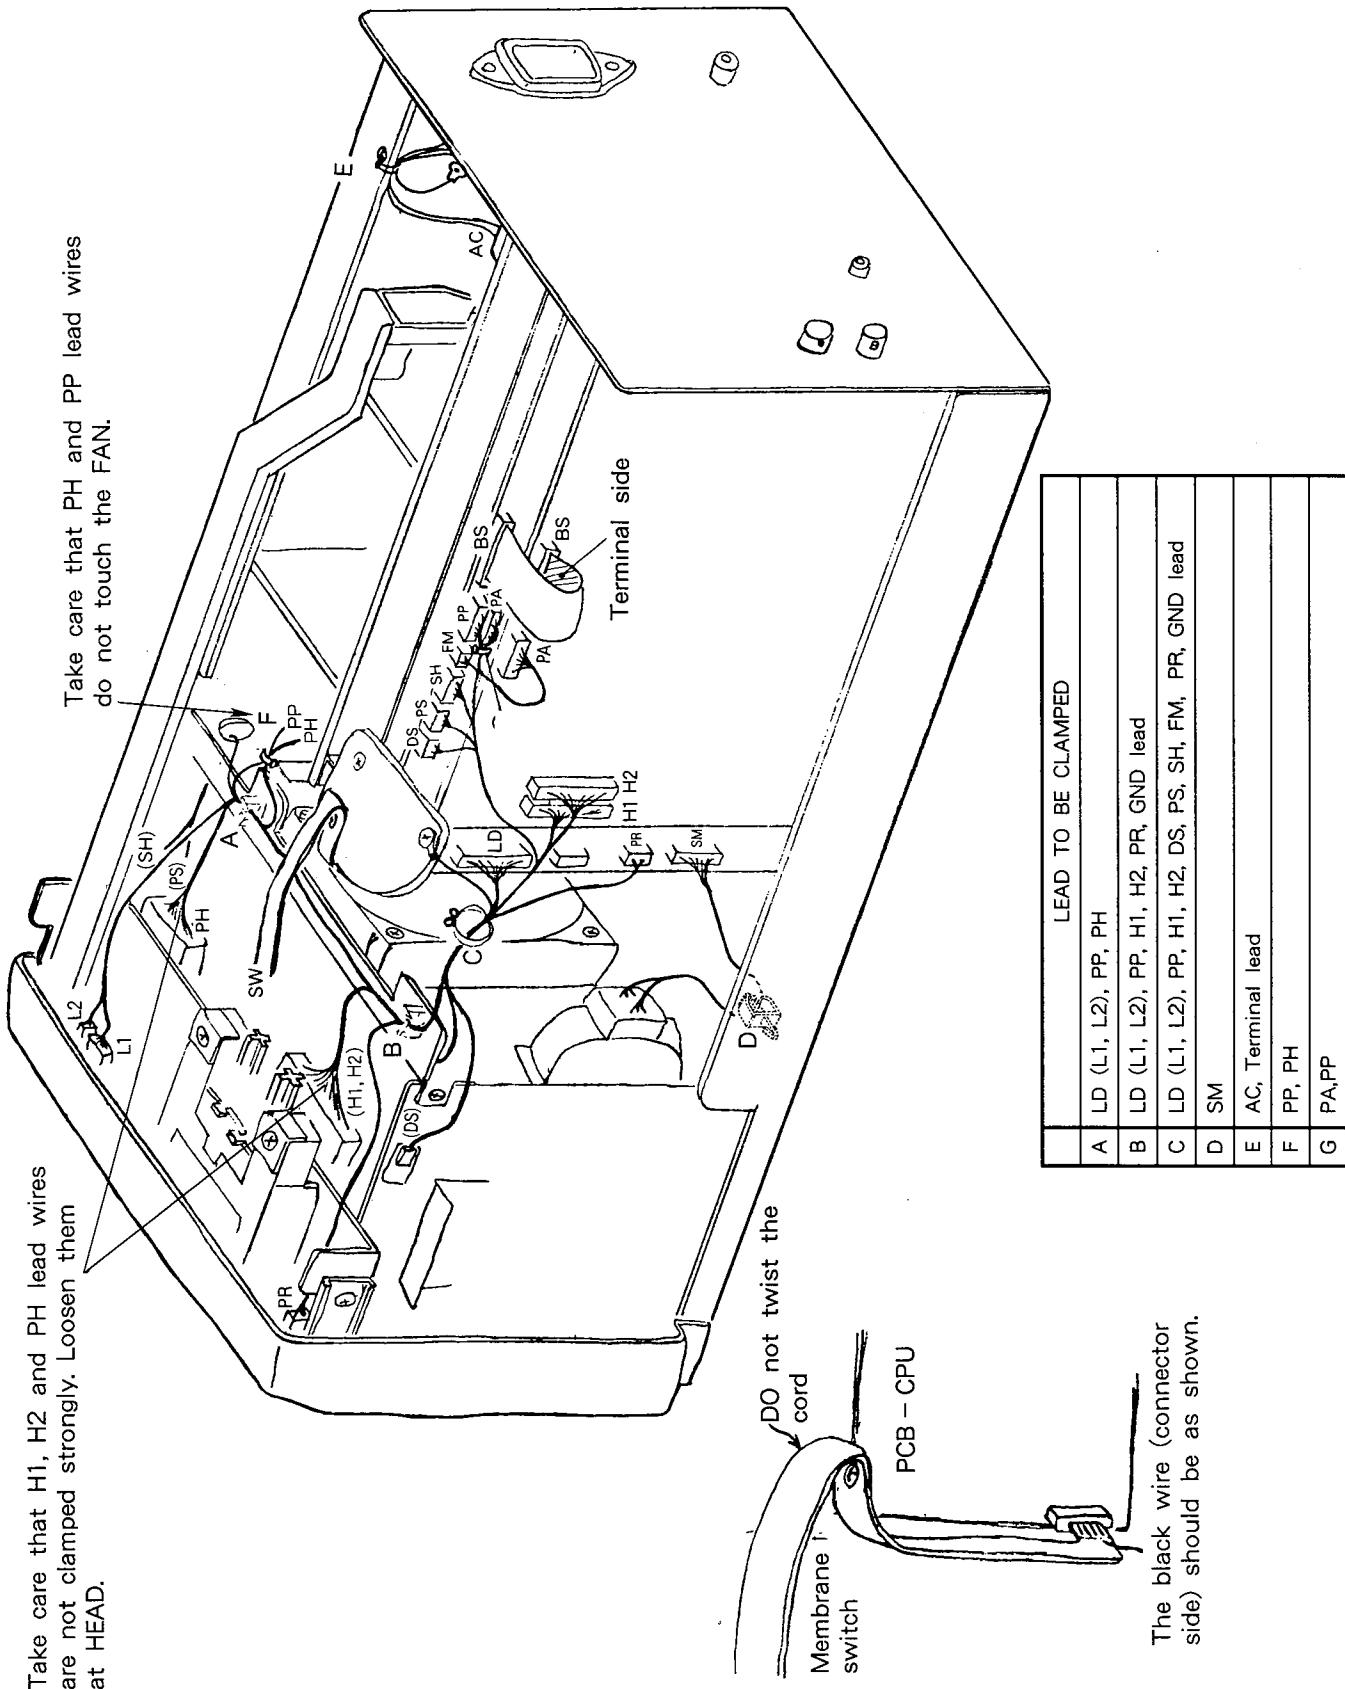

PRODUCT SAFETY NOTICE

Many electrical and mechanical parts in video copy processor have special safety related characteristics. These characteristics are often not evident from visual inspection nor can the protection afforded by them necessarily be obtained by using replacement components rated for higher voltage, wattage, etc. Replacement parts which have these special safety characteristics are identified in this service manual. Electrical components having such features are identified by shading on the schematic diagram and the parts list of this service manual and by marking on the supplementary sheet for this chassis to be issued subsequently.

Therefore replacements for any safety parts should be identical in value and characteristics.

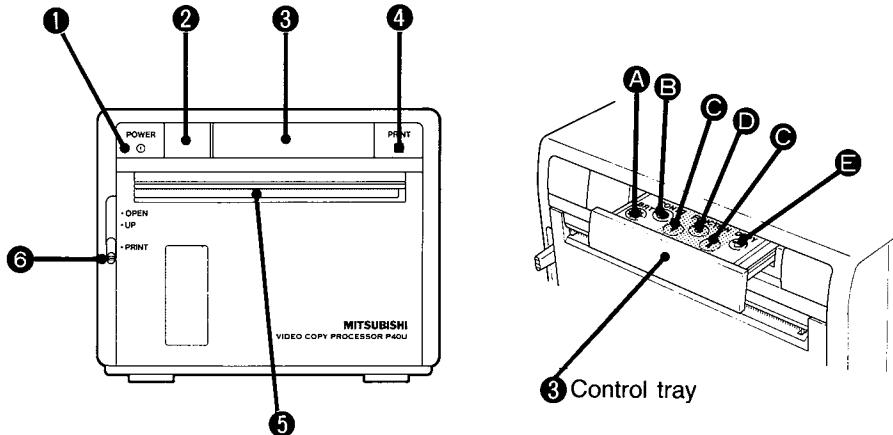

The lead wires to be clamped are listed in the table below.

Note : The inner wires are routed or clamped so that they do not come close to the heat generating or high-tension parts. After servicing route all wires in their original position.

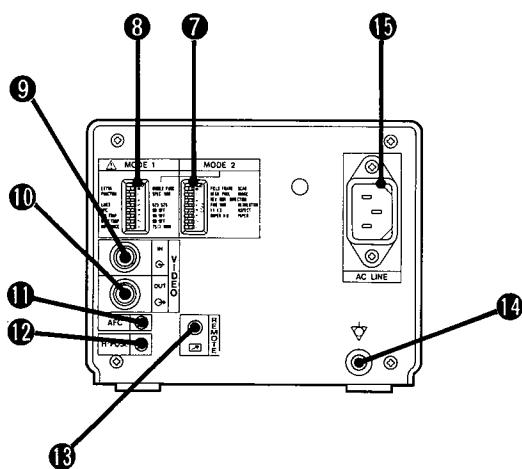

FEATURES AND FUNCTION

Front Panel

	Name	Function
①	POWER switch	Turns on/off the power.
②	Indicator	Displays standby, functions and error messages.
③	Control tray Ⓐ Brightness button Ⓑ Contrast button Ⓒ Function value change button Ⓓ Function button Ⓔ Copy button	Adjusts brightness. Adjusts contrast. Changes each function value. Selects functions. Press this button for additional copies of the previous print-out.
④	Print button	Press this button to memorize and print the picture displayed at that instant.
⑤	Print exit/Cutter	Printed paper will come out through this slot.
⑥	Lever	Front panel open-close/Thermal head up-down

Rear Panel

	Name	Function
⑦	MODE 2 switch	Selects a special function.
⑧	MODE 1 switch	
⑨	VIDEO IN connector (BNC type)	Video signal input
⑩	VIDEO OUT connector (BNC type)	Video signal output (Monitor output)
⑪	AFC control	Adjust AFC
⑫	Horizontal position control	Adjust the horizontal position of a picture.
⑬	Remote control terminal	Terminal to connect the remote controller
⑭	Potential equalization terminal	Makes the connected equipment potential equal.
⑮	Power terminal (AC-IN)	Connect the power cord to this terminal.

DISASSEMBLY

Removal of CABINET

1. Remove four screws securing the CABINET. (Fig.1)
2. Slide the cabinet slightly backward and remove it.

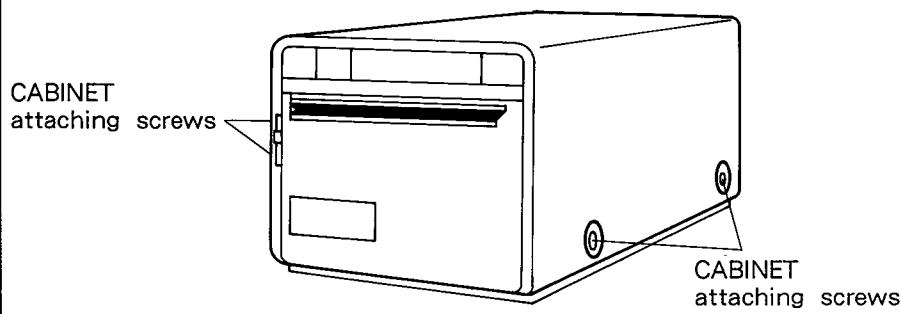

Fig. 1

Removal of DOOR UNIT

1. Set the knob to "OPEN" and open the DOOR.
2. Remove the CAPS.
3. Hold up the PAPER HOLDER slightly and remove the DOOR UNIT.
4. For re-assembling, reverse the procedure.

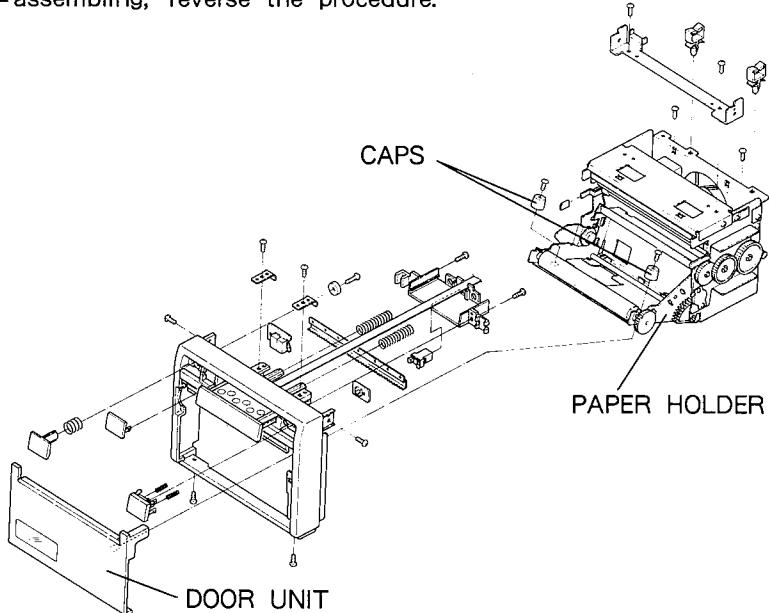

Fig. 2

Removal of the FRONT assembly

1. Remove the CABINET. (Fig. 1).
2. Remove the DOOR UNIT.
3. Disconnect the CONNECTORS [LD], [PR], [SW] connected to CPU PCB.
4. Remove the MEMBRANE SWITCH attaching screw connected to the PCB HOLDER. (Fig. 3)
5. Remove the earth wire connected to the PCB HOLDER. (Fig. 3)
6. Remove 4 screws securing the FRONT assembly. (Fig. 4)
7. Remove the KNOB. (Fig. 4)
8. Remove the FRONT Assembly to your side.
(Note)
Remove from the left side so that the right end of the PAPER SHAFT is not hit. (Fig. 2)

Removal of the FRONT assembly

9. For re-assembling, reverse the procedure.

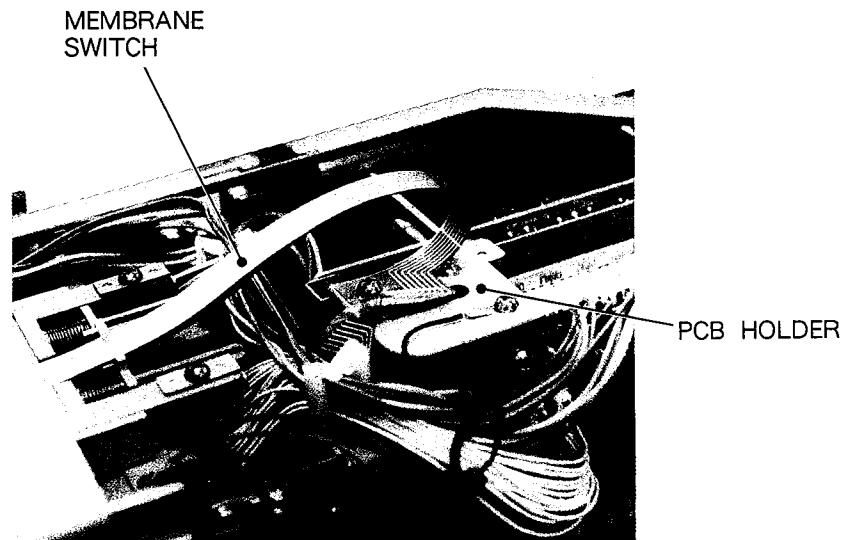

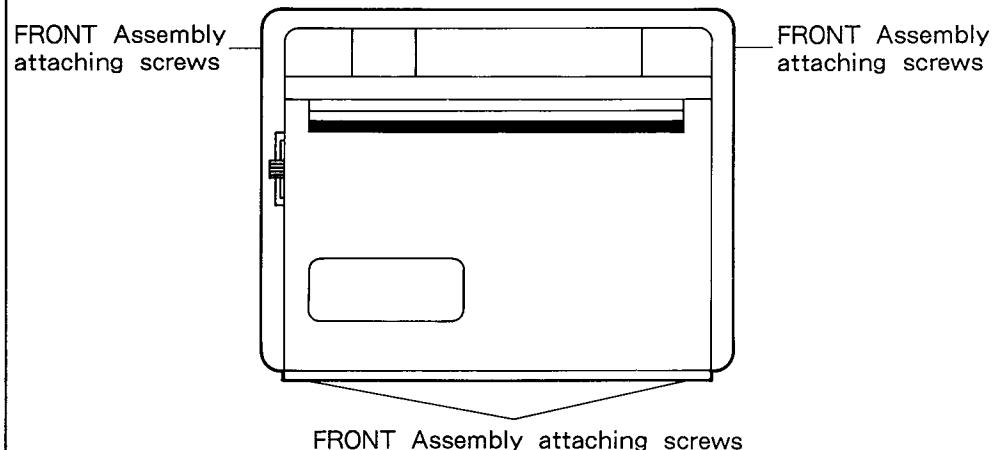

Fig. 3

FRONT Assembly attaching screws

Fig. 4 FRONT assembly

Removal of VIDEO PCB

1. Remove the CABINET. (Fig. 1)
2. Remove the PCB HOLDER. (Fig. 3)
3. Remove the REAR PANEL. (Fig. 5)
4. Remove the screw securing the PCB R BRACKET. (Fig. 5)
5. Disconnect all the connectors connected to VIDEO PCB.
6. Hold up the right side (rear panel side) of VIDEO PCB slightly, slide it to the front and remove it.
7. Remove the screws securing VIDEO PCB.
8. When re-assembling, reverse the procedure.

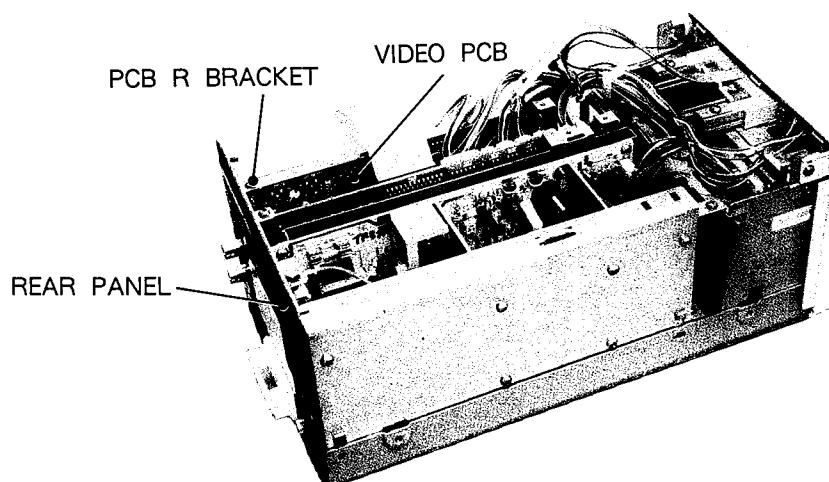

Fig. 5

Removal of CPU PCB

1. Remove the CABINET. (Fig. 1)
2. Remove the PCB HOLDER. (Fig. 3)
3. Remove the REAR PANEL. (Fig. 6)
4. Remove screws securing PCB R BRACKET. (Fig. 6)
5. Disconnect all the connectors connected to CPU PCB.
6. Hold up the right side (rear panel side) of CPU PCB slightly, slide it to the front and remove it.
7. Remove screws securing CPU PCB.
8. When re-assembling, reverse the procedure.

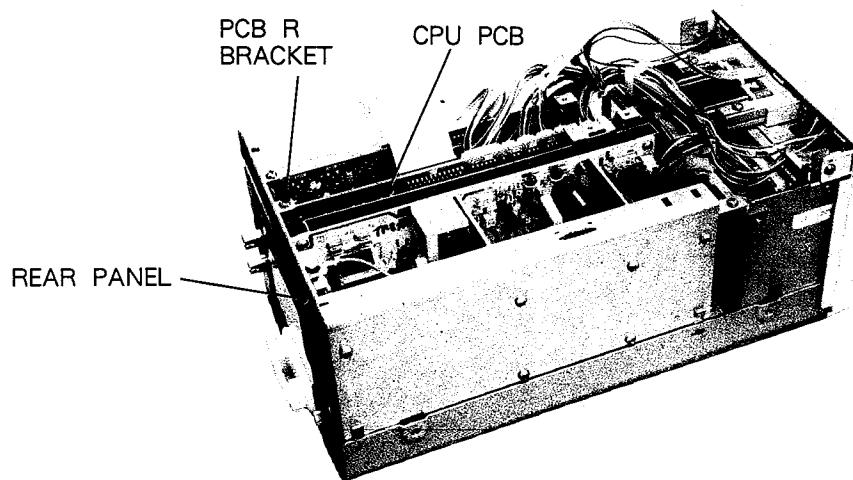

Fig. 6

Removal of POWER PCB assembly

1. Remove the CABINET. (Fig. 1)
2. Remove the PCB HOLDER. (Fig. 3)
3. Remove the screws securing the POWER SWITCH BRACKET. (Fig. 7)
4. Remove B-P SWITCH HOLDER and remove the POWER SWITCH BRACKET. (Fig. 7)
5. Remove screws securing POWER PCB assembly. (Fig. 7)
6. Remove one (top right) of the four screws securing the REAR PANEL. (Fig. 7)
7. Slide the POWER PCB assembly to the front, remove it from the set and disconnect all the connectors.
8. When re-assembling, reverse the procedure.

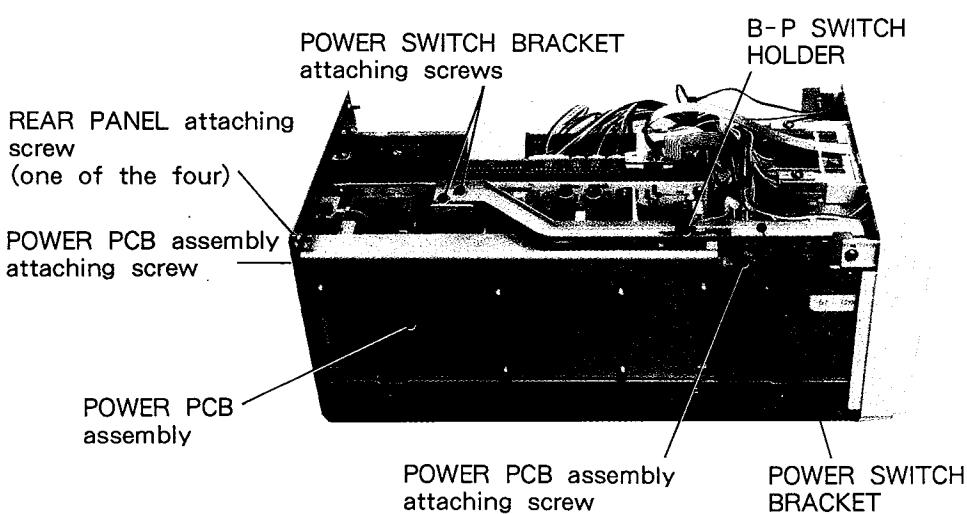

Fig. 7

Removal of PRINTER assembly

1. Remove the CABINET. (Fig. 1)
2. Remove the FRONT assembly
3. Remove the screws securing the POWER SWITCH BRACKET. (Fig. 7)
4. Remove the B-P SWITCH HOLDER and remove the POWER SWITCH BRACKET. (Fig. 7)
5. Remove the screws attaching POWER PCB assembly. (Fig. 7)
6. Disconnect all the connectors connected to the PRINTER UNIT.
7. Disconnect CONNECTORS DS, FM, PS, SH, SM connected to CPU PCB.
8. Remove the screws securing the PRINTER UNIT (Fig. 8)
9. Slide the PRINTER assembly to the front and remove it.
10. When reassembling, reverse the procedure.

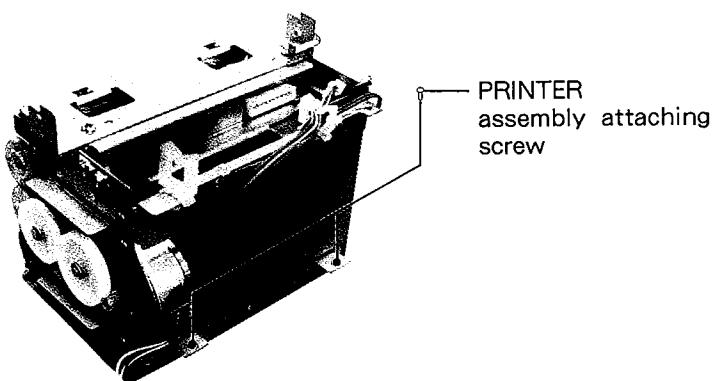

Fig. 8

ASSEMBLY

Replacement of FAN MOTOR

1. Remove the PRINTER UNIT.
2. Remove screws securing the FAN MOTOR. (Fig. 9)
3. When re-assembling, reverse the procedure.

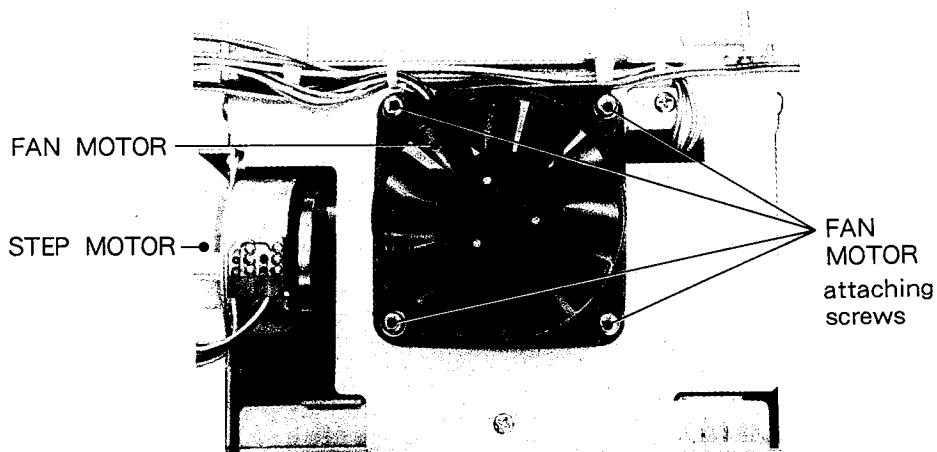

Fig. 9

Replacement of STEP MOTOR

1. Remove the PRINTER UNIT.
2. Remove the STEP MOTOR attaching screws. (Fig. 10)
3. When re-assembling, reverse the procedure.

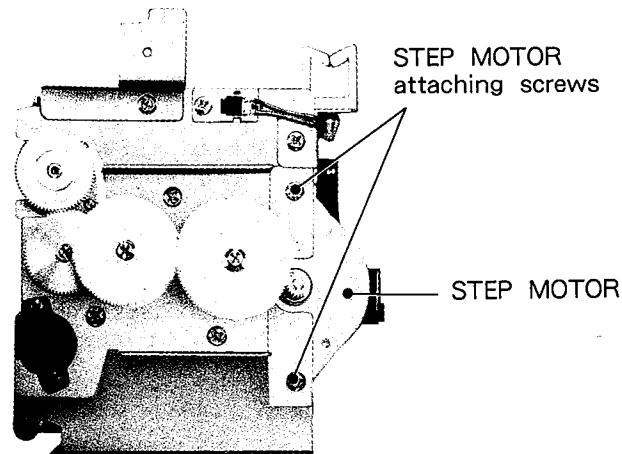

Fig. 10

Replacement of PLATEN ROLLER

1. Remove the DOOR assembly.
2. Remove an E-RING on the left side of the PLATEN ROLLER. (Fig. 11)
3. Remove BEARINGS. (Fig. 11)
4. Slide the PLATEN ROLLER to the right and remove it.
5. When re-assembling, reverse the procedure.
(Note)
Be careful of the direction of bearings.

**Replacement of
PLATEN ROLLER**

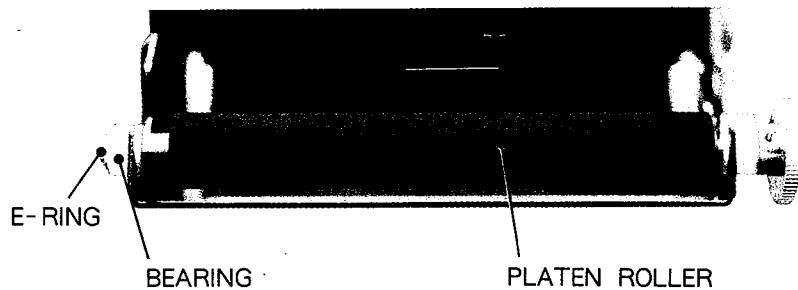

Fig. 11

**Replacement of
PAPER HOLDER**

1. Remove the PRINTER UNIT.
2. Remove E-RINGS (both sides) of the PAPER SHAFT. (Fig. 12)
3. Pull out the PAPER SHAFT to right side.
(Note)
Be careful not to lose the door spring which comes off in the above process. (Fig. 12)
4. Remove the PAPER HOLDER to your side.
5. When re-assembling, reverse the procedure.

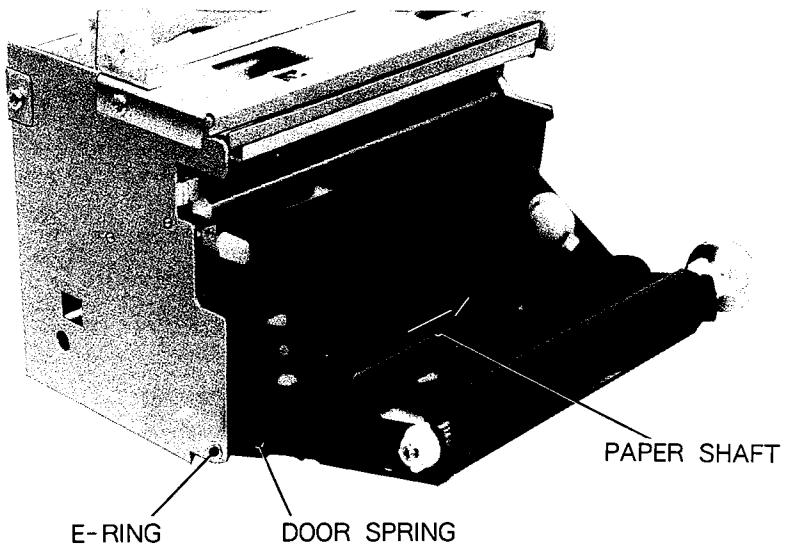

Fig. 12

**Replacement of the
HEAD assembly**

1. Remove the CABINET. (Fig. 1)
2. Remove the FRONT assembly.
3. Remove the screws securing POWER SWITCH BRACKET. (Fig. 7)
4. Remove the B-P SWITCH HOLDER and remove the POWER SWITCH BRACKET. (Fig. 7)
5. Remove the screws securing the UPPER PLATE. (Fig. 13)
(Note)
The HEAD SPRING is held with the UPPER PLATE. Be careful that the HEAD SPRING does not jump up.
6. Disconnect all the connectors connected to the HEAD assembly.
7. Remove the screws securing the HEAT SINK. (Fig. 13)

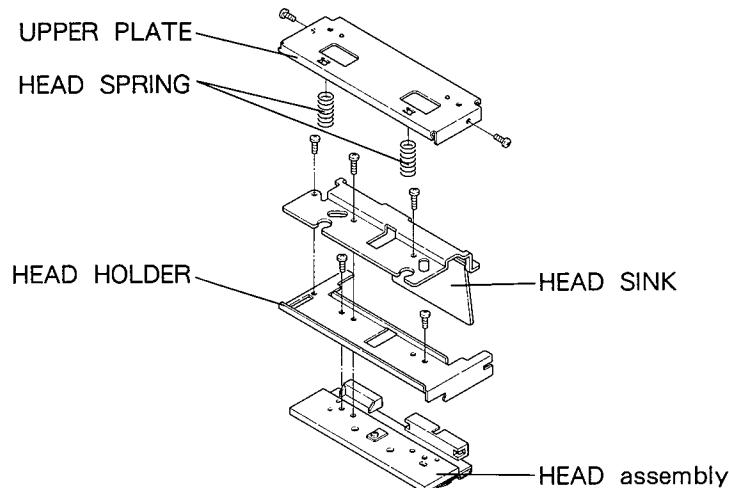

Fig. 13

8. Hold up the front part of the HEAD HOLDER, slide it to your side and remove it.
9. Remove screws securing the HEAD assembly.
(Note)
Be careful not to touch the HEAT GENERATING PART. (Fig. 14)
10. When re-assembling, reverse the procedure.
(Note)

When fixing the HEAD assembly and the HEAD HOLDER with screws, use the GAUGE BAR and TIGHTEN screws after confirming that the holes are aligned.

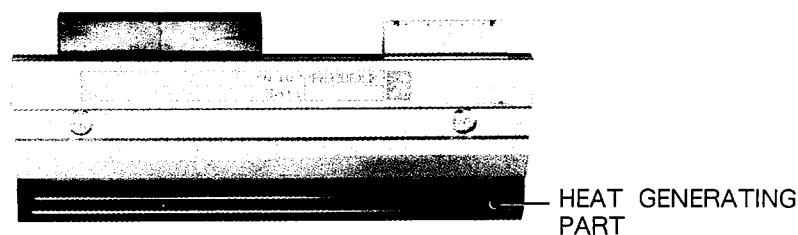

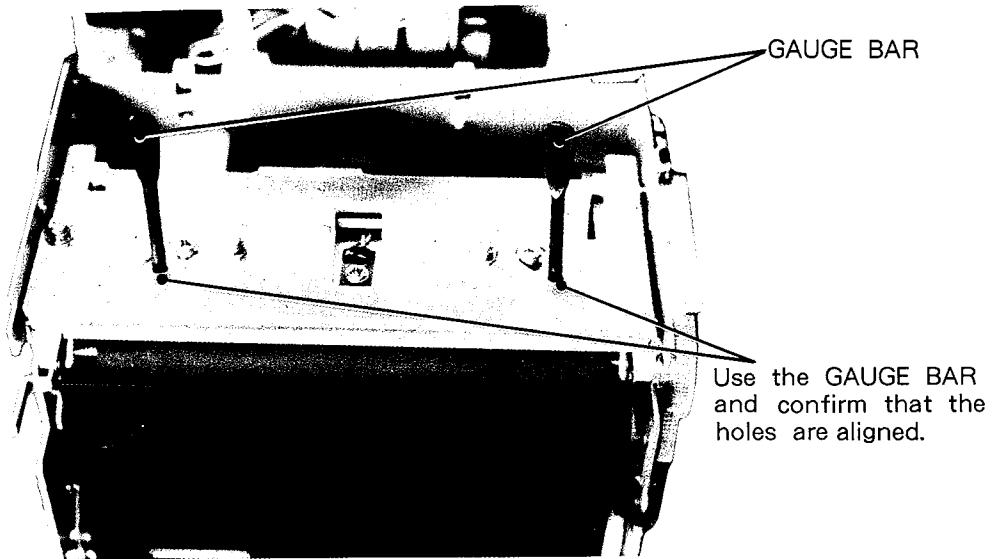

Fig. 14

**Replacement of the
HEAD assembly**

Use the GAUGE BAR
and confirm that the
holes are aligned.

Fig. 15

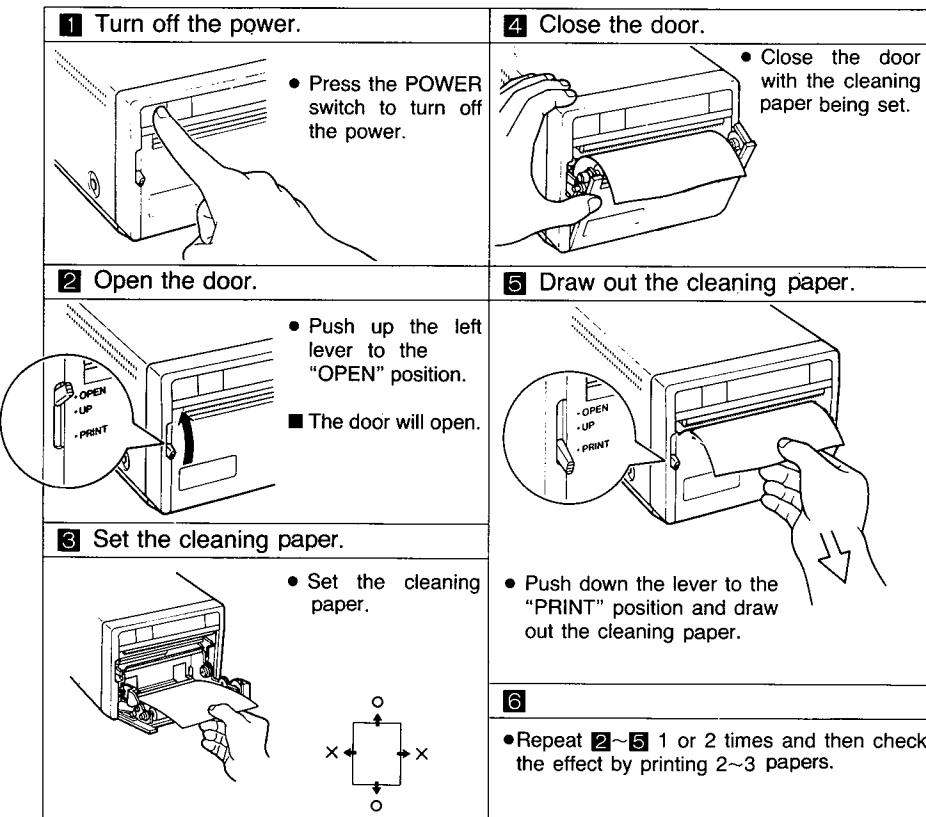

CLEANING METHOD

Cleaning of THERMAL HEAD

When thermal head is dirty with dust or dirt, rain-drop patterns or white vertical lines may appear on the printed picture.
In this case, use the attached cleaning sheet or a THERMAL HEAD CLEANER PEN TH-2000 (859C425050) (which can be purchased separately) in the following procedure.

※ Do not use a russet CLEANING PAPER (parts No. ; 857P001030).
Because it may damage the THERMAL HEAD.

● How to use the CLEANING PAPER

● How to use THERMAL HEAD CLEANER PEN

- Draw out the pen from the body and pour appropriate amount of cleaning solvent to the pen body.
 - When the pen core becomes dirty, replace it with the attached pen.
 - (Note) Move the cleaner pen parallel to the heat generating part (brown part).
 - Since the cleaning solvent is inflammable, close the cap after use and be particularly careful against fire.
 - Keep it in a cool and dark place with no exposure to direct sun beams.

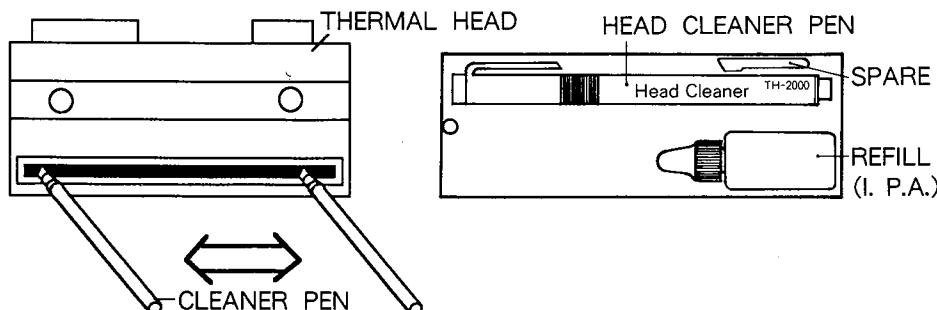

Fig 16

Fig 17 HEAD CLEANER PEN
(Separate purchase jig No. : 859C425050)

Cleaning of PLATEN ROLLER

When the PLATEN ROLLER is very dirty with dust and dirt from paper adhered print quality may be devastated. In such cases, clean the platen roller by the following procedure.

1. Open the DOOR or the SET so that the PLATEN ROLLER can be cleaned.
2. Check the PLATEN ROLLER. If dirt or dust is adhered, clean the ROLLER using the blower brush shown in Fig. 19.
3. When the PLATEN ROLLER is particularly dirty, use alcohol and clean it with a tooth brush while taking care not to damage the ROLLER.
4. When the cleaning is finished, check if normal printing is performed.

Adjustment item	Adjustment point	Adjustment method
Adjustment of Supply voltage	VR971,TP91 PCB-POWER	<p>1. Connect a voltmeter + to TP91 and - to the metallic board of chassis. Turn VR971 to 90 degree angle counter-clockwise . 2. Turn on POWER SW. 3. Adjust the voltage to $25V \pm 0.5V$ with VR971.</p>
Initialization of EEPROM		<p>* After exchange in IC309 (EEPROM) ,initial setting should be done according to the following.</p> <ol style="list-style-type: none"> 1. Turn off POWER SW. 2. Turn on POWER SW while pressing both BRIGHT button and COPY button . 3. Release BRIGHT button and COPY button after confirming that the LED display changes as follows. 
Adjustment of Main voltage/ Head voltage	VR971/VR951, TP91/TP92 PCB-POWER	<p>1. Calculate E1 and E2 with the equation in below from the resistance value indicated on the HEAD.</p> $E2 = 24\sqrt{R/2075} [v] \cdots \text{Refer to Conversion Table.}$ $E1 = E2 + 2.5 [v]$ <p>2. Connect + of a voltmeter to TP91 emitter of Q952 and - to the chassis metal plate and adjust with VR971 so that the reading is $E1 \pm 0.05V$.</p> <p>3. Connect + of a voltmeter to TP92 and - to the chassis metal plate.</p> <p>4. Adjust with VR951 so that the reading of the voltmeter is $E2 \pm 0.05V$.</p> <p>5. Remove the voltmeter.</p> 

Adjustment item	Adjustment point	Adjustment method
Adjustment of Paper detection level	VR301,TP31 PCB-CPU	<p>1. Connect + of a voltmeter to TP31 and - to the chassis metal plate.</p> <p>2. Adjust with VR301 so that the reading of the voltmeter is $4.0 \pm 0.1V$.</p> <p>(Note) Before adjusting VR301 and VR302, remove the screw that fastens to the flat-cable.</p> <p>3. Confirm the reading of voltmeter is under 1.0V when the door open.</p> 
Adjustment of Head position detecting level	VR302,TP32 PCB-CPU	<p>1. Connect + a voltmeter to TP32 and - to the chassis metal plate.</p> <p>2. Push up the lever to the Head-Up position.</p> <p>3. Adjust with VR302 so that the reading of the voltmeter is $0.8 \pm 0.4V$.</p> <p>4. Confirm the reading of voltmeter is over 4.5V when the lever at "PRINT" position.</p> <p>5. Return the lever to "UP" position.</p>
Adjustment of Vertical synchronization separation	VR103, TP1, TP3 PCB-VIDEO	<p>1. Connect CH1 of an oscilloscope to TP1 and CH2 to TP3.</p> <p>2. Trigger in the falling edge of CH2 and adjust roughly with VR103 so that the rising edge of CH2 is in the position shown below.</p> <p>3. Magnify the rising edge of CH2 with delay sweep and adjust with VR103 so that $tv = 18 \pm 1 \mu sec$.</p> <p>Probe 10 : 1 Setting of the oscilloscope Vertical axis CH1 : 200mV/DIV CH2 : 0.2V/DIV Horizontal axis 50 μ SEC/DIV DELAY Mode 5 μ SEC/DIV</p>  

Adjustment item	Adjustment point	Adjustment method
Adjustment of Horizontal synchronous pulse width	VR107,TP5 PCB-VIDEO	<p>1. Set # 4 : AFC switch of S101 (MODE) to OFF. 2. Connect CH2 of an oscilloscope to TP5. 3. Trigger in the falling edge of CH2 and magnify the pulse width tp with delay sweep. 4. Adjust with VR107 so that the pulse width of the waveform below tp is $tp = 4.5 \pm 0.1 \mu\text{sec}$.</p> <p>Probe 10 : 1 Setting of the oscilloscope Vertical axis CH2 : 0.1V/DIV Horizontal axis 20 $\mu\text{SEC}/\text{DIV}$ DELAY Mode Horizontal axis 1 $\mu\text{SEC}/\text{DIV}$</p>  
Adjustment of Horizontal AFC	VR104, TP1, TP5 PCB-VIDEO	<p>1. Set # 4 : AFC switch of S101 (MODE1) to OFF. 2. Connect CH1 of an oscilloscope to TP1 and CH2 to TP5. 3. Trigger in the falling edge of CH2. 4. Set AFC to ON and adjust with VR104 so that the phase difference between the screen center of the oscilloscope and the falling edge of CH1, $ta = 0 \pm 0.1 \mu\text{sec}$. Then, later, set # 4 : AFC SW to OFF.</p> <p>Probe 10 : 1 Setting of the oscilloscope Vertical axis CH1 : 20mV/DIV CH2 : 0.2V/DIV Horizontal axis 20 $\mu\text{SEC}/\text{DIV}$ DELAY Mode Horizontal axis 1 $\mu\text{SEC}/\text{DIV}$</p>  

Adjustment item	Adjustment point	Adjustment method
Adjustment of Horizontal position	VR106, TP1, TP4 PCB-VIDEO	<p>1. Set AFC to OFF. 2. Connect CH1 of an oscilloscope to TP1 and CH2 to TP4. 3. Trigger in the falling edge of CH2 and magnify with delay sweep. 4. Adjust with VR106 so that the phase difference between the rising edge of CH1 and the falling edge of CH2 in the Fig. below, $th = 7.0 \pm 0.1 \mu\text{sec}$.</p> <p>Probe 10 : 1 Setting of the oscilloscope Vertical axis CH1 : 20mV/DIV CH2 : 0.2V/DIV Horizontal axis 10 $\mu\text{SEC}/\text{DIV}$</p> <p>DELAY Mode Horizontal axis 1 $\mu\text{SEC}/\text{DIV}$</p>  
Adjustment of Clock frequency 2	L105,TP7 PCB-VIDEO	<p>1. Press BRIGHT button once and make the LED display $b\bar{b}$. 2. Connect CH1 of an oscilloscope to TP1 and CH2 to TP7. 3. Trigger in the falling of CH2 and magnify the horizontally synchronous part of CH1. 4. Turn SUB-BRIGHT VR102 clockwise to full. (Note) Be sure to re-adjust SUB-BRIGHT VR102. 5. Turn L105 clockwise and adjust so that $tn = 0.0 \pm 0.1 \mu\text{sec}$.</p> <p>Probe 10 : 1 Setting of the oscilloscope Vertical axis CH1 : 20mV/DIV CH2 : 50mV/DIV Horizontal axis 10 $\mu\text{SEC}/\text{DIV}$</p> <p>DELAY Mode Horizontal axis 0.5 $\mu\text{SEC}/\text{DIV}$</p>  

Adjustment item	Adjustment point	Adjustment method
Adjustment of Clock frequency 1	L104,TP7 PCB-VIDEO	<p>1. Set # 5: BESOLUTION switch of S3018 (MODE2) to "FINE" 2. Set LEVER to print position. 3. Press BRIGHT button once and make the LED display \square. 4. Connect CH1 of an oscilloscope to TP1 and CH2 to TP7. 5. Trigger in the falling of CH2 and magnify the horizontally synchronous part of CH1. 6. Turn SUB-BRIGHT VR102 clockwise to full. (Note) Be sure to re-adjust SUB-BRIGHT VR102. 7. Turn L104 and adjust so that $tH = 0.0 \pm 0.1 \mu\text{sec}$. 8. Push up the LEVER to the Head-up position.</p> <p>Probe 10 : 1 Setting of the oscilloscope Vertical axis CH1 : 20mV/DIV CH2 : 50mV/DIV Horizontal axis 10 $\mu\text{SEC}/\text{DIV}$</p> <p style="text-align: right;">DELAY Mode Horizontal axis .5 $\mu\text{SEC}/\text{DIV}$</p>  

Adjustment item	Adjustment point	Adjustment method
Adjustment of Monitor output level	VR105,TP7 PCB-VIDEO	<p>1. Make this adjustment after disconnecting the monitor connected to the VIDEO OUT terminal and terminate with $75 \Omega \pm 1\%$.</p> <p>2. Press BRIGHT button and make the LED display \square.</p> <p>3. Connect CH1 of an oscilloscope to TP7 and CH2 to TP4.</p> <p>4. Trigger in the falling of CH2 and see the horizontally synchronous part of CH1.</p> <p>5. Turn SUB-BRIGHT VR102 and SUB-CONTRAST VR101 clockwise to full. (Note) Perform readjustment of SUB-BRIGHT VR102 and SUB-CONTRAST VR101 certainly.</p> <p>6. Adjust with VR105 so that the voltage in the Fig. below $V_d = 0.714 \pm 0.01 V_{p-p}$</p> <p>Probe 10 : 1</p> <p>Setting of the oscilloscope</p> <p>Vertical axis CH1 : 20mV/DIV CH2 : 0.1mV/DIV</p> <p>Horizontal axis 10 μ SEC/DIV</p>  

Adjustment item	Adjustment point	Adjustment method
Sub-Contrast/ Sub-Bright adjustment	VR101/VR102 TP7 PCB-VIDEO	<p>1. Input a monochromatic video signal shown in below to the Video Input terminal.</p> $100\% = 0.714 \pm 0.01V_{p-p}$ <p>2. Press BRIGHT button and make the LED display \square.</p> <p>3. Connect CH1 of an oscilloscope to TP7 and CH2 to TP4.</p> <p>4. Trigger in the rising of CH2.</p> <p>5. Adjust with VR102 (Vb adjustment) and VR101 (Vc adjustment) so that the voltages Vb and Vc shown in the Fig. below are the following values.</p> <p>Probe 10 : 1</p> <p>Setting of the oscilloscope</p> <p>Vertical axis CH1 : 10mV/DIV CH2 : 0.2mV/DIV</p> <p>Horizontal axis 10 μ SEC/DIV</p> $V_c = 0.05 \pm 0.01V_{p-p}$ $V_b = 0.05 \pm 0.01V_{p-p}$
