OPERATOR MANUAL
for the
Kodak Min-R MAMMOGRAPHY PROCESSOR
PLEASE NOTE  
The information contained herein is based on the experience and knowledge relating to the subject matter gained by Eastman Kodak Company prior to publication.

No patent license is granted by this information.

Eastman Kodak Company reserves the right to change this information without notice, and makes no warranty, express or implied, with respect to this information. Kodak shall not be liable for any loss or damage, including consequential or special damages, resulting from any use of this information, even if loss or damage is caused by Kodak’s negligence or other fault.

⚠️ Warning  
To avoid hazardous conditions, keep floors and floor coverings around your Processor and associated drains clean and dry at all times. Any accumulation of fluids from mixing tanks, drain lines, etc., should be cleaned up immediately. In the event of an accumulation of liquid due to backup, overflow, or other malfunctions of the drain associated with your Processor, call a plumber or other contractor to correct any problem with the drain. Kodak accepts no responsibility or liability whatsoever for the serviceability of any drain connected to or associated with a Processor. Such drains are the sole responsibility of the customer.

Section 1: Safety

Chemical Hazard

⚠️ **Warning**
Gloves and protective eyewear must be worn when working with chemistry, especially fixer solutions. If chemicals get into the eyes, flush them thoroughly with large volumes of water. If irritation persists, see a doctor.

Besides being a potential cause of falls, the chemistry can contaminate waste water and irritate the skin and eyes. Chemistry spills must be cleaned up immediately. You must:

- prevent the spilled chemistry from entering a waste water drain.
- clean up the spill with a moist mop or rag.
- dispose of cleaning materials and waste water collected during the cleanup according to environment regulations.
- ensure that the air exhaust pipe is always connected to a ventilation system, because inhalation of chemicals is dangerous to health and should be avoided.
- observe all environmental regulation for storage and disposal of waste chemicals.
- use these instructions in conjunction with the chemical instructions.

Operator Precaution

⚠️ **Warning**
The operator must:

- **only** be allowed to remove the Top Cover to avoid electrical and mechanical hazard.
- not exchange any internal parts.
- call service personnel to perform any repairs.
- not operate equipment with a damaged power cord.
- not use an extension cord to power this equipment.
- position the power cord so it will not be tripped over or pulled.

Equipment Damage

⚠️ **Caution**
The equipment is not contained in a sealed cabinet. Therefore, it must not be used in locations where it can come in contact with liquids, including bodily fluids.

This equipment generates, uses, and can radiate radio frequency energy. If not installed by qualified service personnel and used in accordance with the User Guide, may cause interference to radio communications and other electronic devices. Operation of this equipment in a residential area may cause interference, in which case the user, at their own expense, will be required to take whatever measures may be required to correct the interference.
Warning
This device is not medical equipment according to EN 60 601-1 and must not enter the patient environment as defined by EN 60 601-1. The following requirements have to be met:

- Distance from the device to Nonpatient Contact Equipment:
  - Horizontal = 1.83 meters
  - Vertical = 2.5 meters above the floor under the patient

- Contact of the patient and the device simultaneously by the caregiver is not allowed.

- No direct electrical connection is allowed between the device and the Nonpatient Contact Equipment.
Section 2: Overview

The Processor is designed to process medical x-ray sheet film that can be processed in the Kodak RP X-Omat Developer and Replenisher, the Kodak RP X-Omat Fixer and Replenisher, and the Kodak RP X-Omat EX Developer and Replenisher.

The self-threading roller transport system has:
- a film-length detection system
- a replenishment system
- a developer solution filter
- a recirculation system for the developer and fixer solutions
- an automatic standby feature

The Processor can operate at 2 different transport speed cycles:
- Standard Cycle has a transport speed of 76.2 ± 1.5 cm (30.4 ± 0.6 in.) per minute or 157 ± 5 seconds drop time, dry to dry, for a 43 cm (17 in.) sheet of film. The developer temperature is 33.3 ± 0.3°C (92.0 ± 0.5°F).
- Rapid Cycle has a transport speed of 101.6 ± 2.0 cm (40.0 ± 0.8 in.) per minute or 118 ± 4 seconds drop time, dry to dry, for a 43 cm (17 in.) sheet of film. The developer temperature is 34.4 ± 0.3°C (94.0 ± 0.5°F).

**Note**

The transport speed and the developer solution filter can only be changed by qualified service personnel.

A film feed signal sounds 3 seconds after the film being processed has cleared the Rollers of the Detector Crossover Assembly. This indicates that the Processor is ready to accept another piece of film.
Section 3: Processing Film

Start Up

[1] Check that the Processor is off.
[3] Check that the following are seated correctly:
- Developer Rack
- Fixer Rack
- Wash Rack
- Fixer/Wash Crossover Assembly
- Developer/Fixer Crossover Assembly
- Detector Crossover Assembly
- Dryer Assembly

[4] Check that the solutions in the Developer, Fixer, and Wash Tanks are at the Overflow Level.

[6] Check:
   • water is flowing from the Water Inlet Tube of the Wash Tank
   • 2 Evaporation Covers are installed

[7] Install the Top Cover.

⚠️ Warning
Dangerous Voltage

[9] Wait until the Digital Temperature Display displays the correct temperature of the developer solution:

<table>
<thead>
<tr>
<th>Cycle</th>
<th>Temperature</th>
</tr>
</thead>
<tbody>
<tr>
<td>Standard</td>
<td>33.3 ± 0.3°C (92.0 ± 0.5°F)</td>
</tr>
<tr>
<td>Rapid</td>
<td>34.4 ± 0.3°C (94.0 ± 0.5°F)</td>
</tr>
</tbody>
</table>

[12] Adjust the Dryer Temperature Control Knob to the lowest possible temperature that will still allow the film to dry.
Feeding Sheet Film

[1] Press the Run/Standby Switch. The Motors will begin to operate.

⚠️ **Important**
- Feed Mammography film with the emulsion side **down**.
- Feed General Radiography film with the emulsion side **up**.
- A film feed signal will sound when it is safe to feed another sheet of film.

[2] Check that the developer solution is at the correct temperature. See the table on Page 8, Step 9.

➡️ **Note**
The Processor will automatically return to the “Standby” mode after the last film exits the Processor.
Shutdown

[1] Turn off:
   - Main Power Switch
   - water supply

⚠️ Warning
Dangerous Voltage

[2] Disconnect the main power.
[4] Install the Top Cover with a 5 cm (2 in.) opening for venting purposes.

-note
The optimum time to do daily cleaning is at shutdown.
Section 4: Processing Solutions

Preparing the Solutions

⚠️ Warning

- Use eye protection and rubber gloves.
- Wash the mixing equipment thoroughly between solutions to prevent contamination of the processing solutions.
- Do not mix more than a 2-week supply of chemicals.

[1] Mix the volume of processing solution required. Use the instructions packed with the chemicals.

Draining the Tanks

⚠️ Warning

Dangerous Voltage

[1] De-energize and disconnect the main power.

⚠️ Warning

Use eye protection and rubber gloves.

[3] If the Processor has a Silver Recovery Unit connected, disconnect the Fixer Drain Tube at the input side of the Silver Recovery Unit.

[4] Place the Fixer Drain Tube in the Floor Drain or a compatible collection container. Check the local codes for the correct collection procedures.
Caution

Drain only 1 Tank at a time.
Check the local codes for the correct collection procedures.
Do not interchange the Weirs:

<table>
<thead>
<tr>
<th>Weir</th>
<th>Tank</th>
</tr>
</thead>
<tbody>
<tr>
<td>red</td>
<td>Developer</td>
</tr>
<tr>
<td>blue</td>
<td>Fixer</td>
</tr>
<tr>
<td>beige</td>
<td>Wash</td>
</tr>
</tbody>
</table>

[7] Install the blue Weir.
[8] Remove the red Weir.
[10] Install the red Weir.
[13] Install:
  • beige Weir
  • Top Cover
Filling the Tanks

- **Warning**
  Dangerous Voltage
  [1] De-energize and disconnect the main power.

- **Warning**
  Use eye protection and rubber gloves.
  [3] Carefully and slowly remove the correct Crossover Assembly and Rack from the Tank that is to be filled.
Install the Splash Guard between the Developer Tank and the Fixer Tank.

**Caution**
- Small amounts of fixer will cause excessive developer contamination.
- Use the Drip Tray.
- If solutions are changed in both Tanks, fill the **Fixer Tank first** so any solution that spills into the Developer Tank can be completely cleaned.

To fill the Fixer Tank, add fixer replenisher until the solution is at the **higher** Fill Line on the blue Weir.

Remove and rinse the Splash Guard.

Install the Splash Guard over the Fixer Tank.

To fill the Developer Tank:

(a) Fill the Developer Tank **half full** of developer replenisher from the Replenisher Tank.

(b) Add the **Kodak RP X-Omat** Developer Starter:
   - for Mammography, 380 mL (13 fl oz)
   - for General Radiography, 190 mL (6.5 fl oz)

(c) Fill the Developer Tank to the **lower** Fill Line on the red Weir with developer replenisher.
Caution

- Prevent contamination and spills.
- The Racks are identified with a letter on the Washer and a color on the Wire Tie:
  - “D” for the Developer Rack - red
  - “F” for the Fixer Rack - blue
  - “W” for the Wash Rack - white

[9] Slowly and carefully install the Racks. Use:
  - Drip Tray
  - Splash Guard

[10] Remove the Splash Guard and rinse thoroughly with water.

[11] Install:
  - Crossover Assemblies
  - 2 Evaporation Covers
  - Dryer Assembly, if removed

[12] Check that the developer solution is at the correct temperature. See the table on Page 8, Step 9.

[13] Install the Top Cover.
Section 5: Correcting Difficulties

</tbody>
</table>

1. **Transport Failure**
   - Check that the correct Bulb and Safelight Filter are in the Safelight and at the correct distance from the Feed Shelf and work surface.

2. **Surface Artifacts**
   - Check that the Top Cover is tight on the Processor. Check that there are no leaks in the Light Lock Gasket.

3. **Abnormal Film Densities**
   - 10 x 10 cm films - feed films diagonally if they fail to transport reliably.

4. **Wet Films**
   - For all transport speeds, the buzzer should sound once the trailing edge of the film has advanced 75 mm (3 in.) into the Processor.

5. **Low Solution Levels**
   - Check that the Tank solution levels are at the overflow Weirs.
   - Check for solution in the Replenishment Tanks. Fill if necessary.
   - NOTE: Mix developer replenisher in quantities not to exceed a 2-week supply.

6. **Overlapping of Films**
   - With a reliable thermometer, check that the temperature of the developer is correct. If necessary, have qualified service personnel make adjustments.
   - NOTE: Check the incoming water temperature. It must be a minimum of $4\times{\degree}C$ ($7\times{\degree}F$) lower than the desired developer temperature.
Section 6: Cleaning and Periodic Maintenance

Daily Procedure

**Important**
The optimum time to do daily cleaning is at shutdown.

[1] Identify any change in the operating condition of the Processor to service personnel.

**Warning**
Dangerous Voltage

[2] De-energize the Processor. Disconnect the main power.

[3] Turn off the water supply.

**Warning**
Use eye protection, rubber gloves, and protective clothing before doing any maintenance procedures.

**Caution**
Do not touch or move the Guide Shoes.

[5] Remove and rinse with warm water:
   - 2 Evaporation Covers
   - Crossover Assemblies

[6] Rotate and clean the Rollers with a soft brush and warm water.

[7] Use a cloth or synthetic sponge to remove any water from the Rollers or allow to air dry.

[8] Remove all chemical deposits above the solution level in the processing section.

[9] Clean off debris or buildup from the dryer area with a warm, damp sponge or cloth.

[10] Install:
   - Crossover Assemblies
   - 2 Evaporation Covers

[11] At shutdown for venting purposes, install the Top Cover with a 5 cm (2 in.) gap.
Every Two Weeks

[3] Clean off debris from the dryer area and Dryer Assembly with a warm, damp sponge or cloth.

**Caution**
- Avoid contamination of the processing solutions.
- Use the Drip Tray when moving Racks to or from the Processor.

[6] Rinse the Racks and wipe them with a clean soft cloth.

[7] Check:
- Chains move freely
- Rollers rotate smoothly

[8] Install:
- Racks
- Dryer Assembly
- Top Cover
[9] To check the operation of the Silver Recovery Unit if installed:

(a) Check that no solution is flowing through the Bypass.

(b) If solution is present in the Bypass, the Silver Recovery Unit is not operating. Make a call to service personnel.

(c) Use the Kodak Silver Estimating Test Papers, Catalog No. 196 5466, to check the silver content of the solution flowing into the drain.

(d) If the test results indicate more than 1 gram/liter of silver, a new Silver Recovery Unit must be installed. Make a call to service personnel.
Section 7: New Equipment Warranty

Warranty Coverage
Kodak warrants the Processors to function properly for 1 year from the date of initial installation, when installed within one year from the date of shipment.

If the equipment does not function correctly during the warranty period, the dealer that sold the equipment will provide or arrange for repair of the equipment during the dealer's normal working hours. Such repair service will include any necessary adjustments and/or replacement of parts necessary to maintain your equipment in good working order.

How to Obtain Service
Should equipment require service, see the sales contract for details on whom to call for service, or contact the dealer that sold you the equipment.

Limitations

- Warranty service is limited to the contiguous United States, the island of Oahu in Hawaii, and certain areas of Alaska.
- This warranty does not cover circumstances beyond Kodak's control, misuse, or abuse. Any attachments, accessories, or alterations not marketed by Kodak (including service or parts to correct problems resulting from the use of such attachments, accessories or alterations), failure to follow Kodak's operating instructions, or supply items.
- Kodak makes no other warranties, express, implied, or of merchantability for this equipment.
- Repair without charge is Kodak's and the dealer's only obligation under this warranty.
  - Kodak will not be responsible for any consequential or incidental damages resulting from the sale, use, or improper functioning of this equipment even if loss or damage is caused by the negligence or other fault of Kodak.
  - Such damages for which Kodak will not be responsible, include, but are not limited to, loss of revenue or profit, downtime costs, loss of use of the equipment, cost of any substitute equipment, facilities or services or claims of your customers for such damages.
- This limitation of liability will not apply to claims for injury to persons or damage to property caused by the sole negligence or fault of Kodak or by persons under its direction or control.
